Name: _____ Date: _____ Page # _____

Activity: Charge It

Activity	Procedure	Observations
#1	Rub the comb with a piece of wool. Place the comb just above the small pieces of paper. Record your observations.	
#2	Rub the acetate attached to the ring clamp with a paper towel. Rub an ebonite rod with fur and bring it near the acetate. Record your observations.	
#3	Rub the acetate attached to the ring clamp with a paper towel. Rub the other acetate piece with a paper towel and bring it near the acetate attached to the ring clamp. Record your observations.	
#4	Rub the balloon on your hair and then place it on the wall. Record your observations.	
Teacher Demo Rub the ebonite rod with a piece of wool. Turn on the water tap so a gentle stream forms. Bring the rod towards the stream of water. Record your observations.

It's lesson time!

Analysis

Now that the lesson is complete. Use the Electrostatic Series to answer the questions about what you saw in the lab activity.

Table 1 Electrostatic Series

Material	Charge tendency
human skin	+ (weaker tendency to gain electrons)
rabbit fur	
acetate	
glass	
human hair	
nylon	
wool	
cat fur	
silk	
paper	
cotton	
wood	
amber	
rubber balloon	(stronger tendency to gain electrons)
vinyl	
polyester	
ebonite	–

1. a) What charge did the comb acquire?

   b) What charge did the paper have?

   c) What law did this demonstrate?

2. a) What charge did the acetate acquire?

   b) What charge did the ebonite rod acquire?

   c) What law did this demonstrate?

3. a) What charge did the acetate acquire?

   b) What part of the Law of Electrostatic charges did this demonstrate?

4. Why do you think the balloon sticks to the wall?

5. a) What charge did the ebonite rod acquire?

   b) What charge do you think the water has? Explain.
